Disposal of the old appliance

Before disposing an old appliance, please make sure it's inoperative and safe. Unplug the appliance and remove or destroy all of the springs, latches, or bolt-locks in order to avoid the risk of child entrapment.

It must be noted that the refrigeration system contains insulating gases and refrigerants, which require specialized waste disposal. The valuable materials contained in a refrigerator can be recycled. Contact your local waste disposal center for proper disposal of an old appliance and contact your local authority or your dealer if you have any question. Please ensure that the pipe work of your refrigerator does not get damaged prior to being picked up by the relevant waste disposal center, and contribute to environmental awareness by insisting on an appropriate, any-pollution method of disposal.

Disposal of the packaging of your new appliance

All the packaging materials employed in the package of your new appliance may be disposed without any danger to the environment.

The cardboard box may be broken or cut into smaller pieces and given to a waste paper disposal service. The wrapping foil is made of polyethylene and the polyethylene pads and stuffing contain no fluorochloric hydrocarbon.

All these valuable materials may be taken to a waste collecting center and used again after adequate recycling.

Consult your local authorities for the name and address of the waste materials collecting centers and waste paper disposal services nearest to your house.

Safety Instructions and Warnings

Before starting the appliance, read the information given in the User's Guide carefully. The User's Guide contains very important observations relating to the assembly, operation and maintenance of the appliance.

Keep the User's Guide in a safe place and remember to hand it over to the subsequent owner, if you ever sell the appliance.

The manufacturer does not accept responsibility for any damages that may arise due to non-observation of the following instruction.

*Damaged appliances are not to be put into operation. In case of doubt, consult your supplier.
**Cautions**

*Connection and installation of the appliance are not to be carried out in strict compliance with the relative instructions set forth in the Use's Guide.

*For the purpose of safety, the appliance must be properly grounded in accordance with specifications.

*Always remember to unplug the appliance before cleaning. To disconnect the appliance, pull at the plug itself, not the cord.

*Keep alcoholic beverages in airtight bottles or containers and always store in an upright position. In addition, do not store any explosive substances inside the appliance. **Danger of explosion!**

*Do not damage any parts of the appliance that carry refrigerator by piercing or perforating the refrigerator's grooves with sharp or pointed items, crushing or twisting any tubes, or scraping the coatings off the surfaces. If the refrigerant spurts out and gets into eyes, it may result in serious eye injuries.

*Do not obstruct or cover the ventilation grille of the appliance.

*Do not allow children to play with the appliance. In no case should children be allowed to sit on the drawers or hang onto the door.

Should you have bought your new fridge/freezer to replace an old appliance, please make sure that all existing latch or bolt-locks on the old appliance are destroyed, before you dispose of it.

This will ensure that a child cannot get trapped inside.

Please have the old appliance ecologically disposed of by a company specialised in environmental protection, since the appliance may contain harmful components in the refrigerant and this must be removed with special equipment. Please check with your dealer or your local authority.

Make sure that the refrigerating system containing the refrigerant, especially the heat exchanger at the back of the appliance, is not damaged during transportation to the disposal or collection site, so that you can be sure that the refrigerant does not leak out.

Details concerning the type of refrigerating/isolating agent used can be found on the appliance's rating plate.

*Warning: Keep ventilation openings in the appliance enclosure or in the structure for building in clear of obstruction.

*Warning: Do not use mechanical devices or other means to accelerate the defrosting process, other than those recommended by the manufacturer.

*Warning: Do not damage the refrigerant circuit.

*Warning: Do not use electrical appliances inside the food storage of the appliance.

*It is necessary to have the plug accessible after installation.

*If the supply cord is damaged, it must be replaced by a supplied cord or assembly available from the manufacturer or its service agent.

*Connection of power supply and installation should be conducted in accordance with the instructions in the operation manual.

*Only the tools regulated by the manufacturer can be used for defrosting.

**Specifications**

*This appliance is designed for food refrigeration, ice making and frozen food storage.

*It is intended strictly for household use. If using it for industrial or commercial purposes, be sure to observe the relevant norms and regulations.

*The refrigerating circuit is leak-proof.
Refrigerator Diagram

1. Freezing compartment  
2. Temperature Controller  
3. Shelves  
4. Egg tray  
5. Bottle racks

This diagram may vary slightly with the layout of the refrigerator you have just purchased due to technical improvements.
Preparation

Unpacking
Remove all packing materials.

Check attachments and materials
Checking should be conducted with reference to the Packing List. Contact the local distributor if discrepancies are found.

Ensure proper location of the refrigerator.
Clean the refrigerator before use.
(See the following section “Cleaning”)

Idle time
After the refrigerator has been sited and cleaned, let it stand for more than 30 minutes before connecting the power source.

Ventilation (Figure 1)

*Level the kitchen cabinet unit with a spirit level and a try square. Level the unit by placing packing material underneath if required.

*A minimum gap of 38mm must be maintained at the back of the appliance for ventilation.

*Air inlet A must be at least 200 cm square and air must flow through the panel in the cabinet plinth.

*Check that the position of the power socket (1) is correct. AC voltage in the location at which the appliance is to be used must comply with that as shown on the data plate located on the left inside wall of the appliance next to the vegetable bins. The power supply must be suitably earthed.

(Figure 1)
Preparation

Installation (Figure 2)

1. Check that the kitchen unit door is in the correct operating position.
2. Run the mains cable through the unit such that it can be connected to the power supply after installing the appliance. Remove the cover (6) only if space is restricted.
3. Place the refrigerator into the kitchen unit. Fix the mountings (1) with screws (2) onto the upper frame when two third of the refrigerator has been pushed in. Then push the refrigerator in completely, ensuring that the gib clamp of the mountings stuck on the horizontal frame of the kitchen unit. Adjust the position of the refrigerator making a 6mm space between inside wall of the kitchen unit and external sides of the refrigerators. Fix the mountings to the horizontal frame of the kitchen unit with screws.
4. Insert the seal in the aperture (approx. 10mm) between the lower front frame and bottom board of the kitchen. Fix lower mountings (3) to the lower front frame with screws (2). Fix the lower mountings to the bottom board of the kitchen unit with screws (2).
5. Properly insert seals in the apertures on the left, upper and right sides of the refrigerator.
6. Fix the door to the holders (4) (each upper and lower position has one) with screws (2). Press close the doors of the refrigerator and of the kitchen unit, and then completely open the doors, and then place the connecting plate (5) to the corresponding holder and fix it to the door of the kitchen unit (space between the connecting plate and the edge of the kitchen unit "t" equals to the thickness of the external board of the kitchen unit, about 20mm). Adjust the connecting element so that the handle side of the kitchen unit door does not make contact with the unit body when closed. (Approximately 1mm gap for large appliances), mount the second door connecting element where appropriate.
7. Plug the open hole in the appliance door.
Operation

Starting the refrigerator
After connecting to the power supply, turn the temperature controller clockwise from position 0 to any position between 1 and 7 to start the refrigerator. The refrigerator compressor will stop when the temperature controller is at position 0.

Adjusting the temperature:
The temperature inside the refrigerator is adjusted by turning the temperature controller. Positions 1 to 7 represent different temperatures from the lowest to the highest.

<table>
<thead>
<tr>
<th>Position</th>
<th>Conditions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-2</td>
<td>Summer or ambient temperature between 25-35°C</td>
</tr>
<tr>
<td>3-4</td>
<td>Spring, autumn or ambient temperature between 15-25°C</td>
</tr>
<tr>
<td>4-5</td>
<td>Winter, or ambient temperature between 5-15°C</td>
</tr>
<tr>
<td>6-7</td>
<td>Quick freeze</td>
</tr>
</tbody>
</table>

Caution: Some time will be required for the refrigerator to reach the set level when temperature adjustments are made. The length of this period is determined by the difference in the existing and set temperatures, the ambient temperature, the frequency with which the door is opened and closed and the amount of food in storage.

Caution: If ambient temperature is below 16 °C, please turn on the “Low-temp Controller”.

Loading the refrigerator with food
When the refrigerator is switched on, do not load food until 1 ~ 2 hours have passed. Usually, food for cold storage or deep freezing can be loaded when the temperature inside the compartment reaches the set point.
Cold storage is for short-term food Storage or for daily consumption.

Although the temperature in most parts of the cold storage compartment can be regulated between 0 and 10 degrees Centigrade, extended periods of food storage is not recommended. Cold storage should only be used for short-term storage.

Cold storage compartment
1. Eggs and butter
2. Beverages and bottled food
3. Food to be frozen
4. Cookies, cooked food and milk

Cautions for cold storage
* Hot food must be cooled to room temperature before storing in the refrigerator.

* Dry any water droplets on the food before placing it in the refrigerator.

* It is recommended that food be sealed in suitable storage bags before being placed in the refrigerator; this will prevent moisture in the food from evaporating and prevent vegetables and fruit from withering or altering in flavor.
Instructions

* Do not store excess quantities or weights of food; food should be stored with spaces in between for better storage results. Never overload shelves, as they may collapse under excessive loads.

* Food to be stored should be sorted according to consumer requirements. Food consumed daily should be placed in the most convenient area, this will minimize opening periods for the door. Do not place food too close to the internal walls.

Food holder cleaning
* Food holders can be taken out for cleaning

Lamp & Replacement:
Lamp: 240V, 10W
Lamp holder: E14 (lamps exceeding 15W must not be used)
* For replacement, unplug to disconnect the power
* Remove the lamp by turning anti-clockwise
Instructions

Instructions for food storage

* Storage period will be extended if vegetables are placed with their roots towards the cold source.

* Leaves of carrots or turnips should be removed before storage.

* Put a wad of tissue on the bottle holder before placing bottles on it so that later cleaning is easier.

* Frozen food can be placed in the cold compartment before serving, as this will conserve energy.

* Onions, garlic, ginger, water chestnuts and other root vegetables should not be stored in the refrigerator, as these foods are suitable for long-term storage at normal temperatures.

* Ripe squash, melon, papaw, bananas and pineapples should not be stored in the refrigerator. Freezing will accelerate the ripening process.
Instructions

Long-term storage of food
As the freezer storage temperature is very low, fresh food can be stored in the freezer compartment for a long time. Food requiring long-term storage can be stored in the frozen food compartment. Attention should be paid to the storage information printed on the food packing.

Frozen food storage
* The recommended weight of fresh food is less than 2 kg.

* Hot food should not be stored in the refrigerator until it has cooled down to room temperature.

* The outside of any food packing should be dried before storage in the freezer, and any packing materials should be odor-free, airtight, non-poisonous and nontoxic.

* Only remove the required amount of food from the refrigerator. Defrosted food cannot be re-stored in the freezer unless it is first cooked.

* Food cut into small portions will freeze faster and be easier to defrost and cook. The recommended weight for each portion is less than 1.5kg.

* Do not put in bottled beer or drinks.

* Do not touch frozen food wet-handed.

Making water-Ice
* Pour water into the water ice mould up to three-quarters of the mould volume, and then place the mould in the freezing compartment.

* Do not use knife or other metal tools to take the ice out of the mould.

* The ice can be easily removed by hand after the mould has been placed in warm water for a short time.
Defrosting the cold storage compartment

The cold storage compartment is designed for automatic defrosting. Frost formed on the back wall will melt and flow via the drainpipe to the evaporating container over the compressor on the back of the refrigerator, where the heat generated by the compressor will evaporate the water.

**Caution:** Always keep the drain over the vegetable and fruit tray clear to ensure the normal flow of defrosted water. Use the rod provided to clear any blockages.

Defrosting the freezer

After a period of operation, a layer of frost will form on the surface of the freezer. Additional electricity will be consumed if this layer becomes too thick. The defrosting process must be carried out when a thick layer of frost has been formed.

To defrost the freezer, first disconnect the power by unplugging the refrigerator, and then remove any food from the refrigerator and place it in a cool place. Use a plastic defrosting tool.

After ice and frost are melted, wipe up the inside of the freezer compartment.

**Caution:** Never use a metal tool or electrical heater for defrosting.

After the defrosting is completed, plug in the refrigerator and it starts operation again.

Power failure

Even in summer, food can be stored in the refrigerator for a few hours after a power failure.

* Don’t put additional food into the refrigerator during a power failure.

* Avoid opening the door during power failures

* If prior notice of a power failure is given, make some ice and put it in a container in the top of the cold storage compartment.

**Caution:** temperature in the refrigerator will rise during a power failure or in the event of technical problems, and the storage period will be reduced.
Defrosting-Cleaning-De-commissioning

Cleaning
The refrigerator should be cleaned regularly to prevent the formation of bad odors.

* Disconnect the power before cleaning the refrigerator.
* Do not use a hard brush, steel brush, detergent, gasoline or other solvents, hot water, acid or alkali for cleaning.
* Wipe water drops on the surface of the refrigerator with a soft cloth.
(1) Do not use excessive amounts of water for cleaning the refrigerator
(2) Use a dry cloth to clean the switch, the lamp and the temperature controller
* Always keep the rubber door seal clean
* Clean the back and sides of the refrigerator regularly.

Cessation of Operation
If the power failure lasts for an extended period, unplug the refrigerator and clean the refrigerator as previously described.
Keep the door of refrigerator open when the power is turned off to prevent any food remaining in the compartment from producing bad odors.

Caution: It is recommended that the refrigerator is not turned off

During Vacations
* Remove any food from refrigerator is the vacation is short. Turn the temperature selection knob to the proper position, and make sure that the door of the refrigerator is properly closed.
* If the vacation is long, take out the food from the refrigerator and disconnect the power. When the frost inside melts, clean and dry the compartment.

Discarding
* Remove the door of the refrigerator when you get rid of it, in case children may get trapped in.

Moving the refrigerator
* Unplug the refrigerator
* Remove any food
* Tightly close the door with tape
**Questions and Answers**

**Events below are not problems:**
* The temperature of the refrigerator and the compressor will rise and the compressor will run for comparatively longer periods when the refrigerator is first started.
* Wipe water drops on the external surface of the refrigerator with a soft cloth.
* When the refrigerator is opened frequently or stay open too long in humid seasons, the cavity will be dampened.
* A slight sound will be heard when the liquid refrigerant circulates or when the compressor switches on and off.
* A slight sound will be heard when defrosted water drops into the evaporating dish.
* The compressor will operate for comparatively longer periods if excessive quantities of food are stored or the ambient temperature is high.
* The evaporator will produce odors if the compartment is not cleaned.

*Caution: The refrigerator should never be restarted until a period of at least five minutes has elapsed.*

**Please determine the cause of the problem before making any repairs.**

</table>
GUARANTEE

This appliance is covered by a full manufacturer’s 2 year parts and 2 year labour guarantee and covers all parts and labour costs associated with the repair of the appliance in a domestic environment. We will repair any defect that arises due to faulty materials or workmanship and use genuine manufacturers parts.

All claims must be supported with the original receipt or other reasonable proof of purchase.

If, during the guarantee period, the appliance becomes irreparable as agreed by the engineer approved by Apelson Appliances UK Ltd then we reserve the right, at our discretion, to exchange the defective product with a replacement appliance at Apelson Appliances UK Ltd sole cost. If the same product is no longer available an alternative will be offered with the same functions as the faulty item.

After an appliance has been repaired or replaced any remaining balance of the Apelson Appliances UK Ltd guarantee will be valid and any further call outs during this prescribed period will be covered by Apelson Appliances UK Ltd on the replacement appliance.

Should any person other than an authorized engineer modify or attempt to repair the appliance then the warranty will be invalid.

The guarantee applies to the UK mainland, Scotland and Ireland but is not transferable between EU countries.

This guarantee is non-transferable to any other person or product.

The guarantee is covered by UK law and is in addition to and does not diminish your legal rights.

EXTENDED PARTS ONLY WARRANTY

As testimony to our commitment to you as a valued customer of Apelson Appliances UK Ltd, we will offer you an additional 3 years parts warranty absolutely free.

If during the extended parts warranty period the appliance fails and it is considered uneconomical to repair our Customer Service Department will offer you the opportunity to purchase the same or equivalent model at a discounted price.

All parts supplied free of charge under the extended warranty must be fitted by our approved engineers and will be subject to a call out charge to fit the part.

EXCLUSIONS TO THE GUARANTEE

This guarantee does NOT cover:

Appliances that have been damaged or neglected as a result of failure to store, assemble, install, use or care of the products in accordance with the manufacturer’s instructions - Apelson Appliances UK Ltd will not accept responsibility under this guarantee if a product is damaged or becomes defective due to, misuse, neglect, wilful or accidental damage or act of god.

Normal wear and tear.

Consumable items such as carbon filters and bulbs.

Claims arising from non-domestic use or commercial environment.

Any gas appliance not fitted by a gas safe qualified installer.

If no fault is found then Apelson Appliances UK Ltd reserves the right to charge for the call out at the going rate of £55.00 plus VAT.

In the course of the service work carried out it may be necessary to remove the built in appliance from its fitted position. If the appliance is glued, grouted or tiled in such a manner that it cannot be removed, it is the responsibility of the customer/installer to remove and reinstall the appliance to facilitate the repair.

This Guarantee does not affect your statutory rights.

The guarantee is offered by Apelson Appliances UK Ltd, 1 Express Way, Off California Drive, Castleford, WF10 5QJ
